

CONTENTS

SECTION ONE: INTRODUCTION	1
Today's Electricity Marketplace	1
Electricity in Modern Society	4
A Brief History of Electricity	5
SECTION TWO: WHAT IS ELECTRICITY?	11
How Electricity Is Created	13
How Electricity Is Used to Perform Useful Tasks	15
The Key Components of the Electric Delivery System	17
The Key Physical Properties of an Electric Delivery System	18
Electricity Cannot Be Stored in Conductors	18
The Path of Electrical Flow Is Difficult to Control	18
Disturbances Travel Very Quickly and Are Hard to Contain	19
Outages and Significant Voltage or Frequency Fluctuations Are Not Acceptable	19
The Four Physical Sectors of the Electricity Business	19
SECTION THREE: ELECTRIC CONSUMERS	23
Residential Customers	24
Commercial Customers	28
Industrial Customers	31
Aggregate Demand Curves	34
SECTION FOUR: SUPPLY	39
Changing Generation Output over Time	40
Types of Generation	41
Coal	41
Nuclear	43
Natural Gas	46
Petroleum	48
Hydropower	48
Wind	50
Solar	51
Other Renewables	52

Electric Storage	53
Demand Side Management as Alternatives to Generation	54
Distributed Energy Resources	55
Environmental Considerations	56
Electric Generation and Greenhouse Gas Emissions	57
Use of Generation to Satisfy the Load Curve	59
Baseload	60
Intermediate load	60
Peak load	60
Generation Use in Regions with Significant Renewables	60
Reserves	61
Ownership of Generation	61
Developing a Generation Portfolio	62
The Future of Generation	63
 SECTION FIVE: TRANSMISSION	 67
Physical Characteristics of Transmission	68
Operation of the Transmission System	70
Transmission Planning	72
Transmission System Costs	73
Transmission Ownership	74
Issues with Transmission Construction	74
Transmission Outages	76
Transmission Smart Grid Technologies	76
The Current State of U.S. Transmission Systems	78
 SECTION SIX: DISTRIBUTION	 81
Physical Characteristics of Distribution	81
Radial Feed	85
Loop Feed	86
Network System	86
Communication Networks	86
Grid Modernization	86
Distributed Energy Resources	87
Microgrids	88
Operating and Planning of the Distribution System	89
Distribution System Costs	90
Ownership and the Current Status of Distribution Systems	90

SECTION SEVEN: ELECTRIC SYSTEM OPERATIONS	93
Operational Characteristics of Power Systems	93
What System Operations Does	94
Who Handles System Operations	94
Forecasting and Scheduling	97
Demand Forecasting	98
Scheduling Supply, Transmission, and Reserves	98
Ancillary Services	100
Frequency Regulation	100
Load-following Resources	100
Spinning Reserves	102
Non-spinning Reserves	102
Supplemental Reserves	102
Flexible Ramp Capacity	102
Voltage Support	103
Blackstart	103
How Supply and Demand Are Kept in Balance in Real Time	103
The Value of Large Geographical Dispatch	104
Scheduling in Regions with High Penetrations of Variable Supply and Distributed Energy Resources	106
The Changing Role of System Operations	107
Transmission System Operations	108
Distribution System Operations	108
SECTION EIGHT: MARKET PARTICIPANTS IN THE DELIVERY CHAIN.....	111
Participants in the Vertically Integrated Market Model	111
Investor-owned Utilities	111
Municipal Utilities and Public Utility Districts	112
Electric Co-ops	113
Federal Power Agencies and Tennessee Valley Authority	113
Public Power Agencies and Joint Power Authorities	114
Power Pools	114
Energy Services Companies	115
Independent Power Producers and Electric Power Marketers	115
Participants in Restructured or Competitive Electric Markets	115
Merchant Generators and Independent Power Producers	116
Transmission Companies	116
Independent System Operators/Regional Transmission Organizations	100
Power Exchanges	117
Wholesale Power Marketers	117

Retail Marketers	118
Community Choice Aggregators	118
Financial Services Companies	118
Transmission Owners	119
Utility Distribution Companies and Distribution System Operators	119
Load-serving Entities	119
Energy Services Companies	120
Distributed Energy Resource Aggregators	120
SECTION NINE: ELECTRIC MARKET STRUCTURES	123
What is an Electric Market Structure?	123
Vertically Integrated Monopoly Utility Model	125
Single Buyer with Competitive Generation Model	127
Wholesale/Industrial Competition Model	129
Complete Retail Competition Model	130
Hybrid Retail Competition Model	131
Trading Arrangements	132
Wheeling	134
Decentralized	135
Integrated	136
The Current Status of Market Structures and Trading Arrangements	138
Markets for Distributed Energy	138
SECTION TEN: REGULATION IN THE ELECTRIC INDUSTRY	141
Why Regulate the Electric Industry?	141
The Goals of Regulators	142
The Historical Basis for Regulation	143
State Regulation	143
Federal Regulation	143
Who Regulates What?	145
Environmental Regulation	146
The Regulatory Process	147
The Initial Filing	147
Preliminary Procedures	148
Hearings	148
The Proposed Decision	149
The Final Decision	149
Review of Decisions	149
Tariffs	149

Setting Rates through a Traditional Rate Case	150
Establishing the Rate Base	150
Determining the Authorized Rate of Return	150
Forecasting Usage	151
Determining a Revenue Requirement	151
Allocating Revenue to Customer Classes	152
Determining Rate Design	153
Allocating Revenue to Charge Types	153
Calculating the Rate	153
Incentive Regulation	154
Performance-based	154
Formula-based	154
Rate Caps	155
Service Standards	155
Market-based Rates	155
State and Federal Rate Methodologies	155
Determining Rates for Compensating Distributed Energy Resources	156
The Future of Regulation	157
 SECTION ELEVEN: THE CONCEPTS OF MARKET RESTRUCTURING	 159
Why Restructuring to Facilitate Competition?	160
Market Evolution under Deregulation	162
Regulation	162
Deregulation	163
Commoditization	164
Value-added Services	165
The Necessary Components for a Competitive Marketplace	165
Supply-side Competition	165
Fair Access to Transmission	166
Liquid Day-ahead and Real-time Markets	167
Unbiased System Operations	167
Demand-side Competition	167
Distribution without Impediments to Competition	168
Opportunities for Hedging Risks	169
Creating a Competitive Market	169
Transitioning Generation	170
Creating a Robust Transmission Market	170
Creating an Unbiased System Operator	171
Transitioning to Customer Choice	171

Continued Regulation of Transmission and Distribution	172
Ensuring Reliability	172
Settlements	173
Future Distribution Restructuring	173
SECTION TWELVE: THE HISTORY OF ELECTRIC MARKET RESTRUCTURING	177
Federal Restructuring	178
The First Step Toward Independent Generation — PURPA of 1978	178
Fostering Wholesale Generation Competition — the Energy Policy Act of 1992 ..	178
Furthering Open Access Transmission — FERC Order 888	180
Encouraging Formation of Regional Transmission Operators — FERC Order 2000 ..	182
Market Design Stalemate	183
Ongoing Slow Growth of ISO Markets	184
Inclusion of Distributed Energy Resources in Wholesale Markets	185
Transmission Planning Evolution	185
State Restructuring	186
Separating the Vertical Utility Functions	186
Allowing Retail Access	187
Continued Regulation of the Monopoly Function	188
Current Status of Retail Choice in the U.S.	188
California — A Bad Retail Competition Experience	189
Texas and New York — More Successful Retail Competition Experiences	192
Restructuring in Other Countries	193
SECTION THIRTEEN: MARKET DYNAMICS	195
Supply and Demand	196
Short-term Supply and Demand	196
Long-term Supply and Demand	198
The Current Supply/Demand Situation in the U.S.	199
Pricing	200
Indexes and Trading Hubs	201
Price Volatility	202
The Importance of Gas Prices in Many Electric Markets	203
Wholesale Market Services	203
Energy and Generation Capacity	204
Forward Energy Markets	204
Day-ahead and Real-time Energy Markets	207
Capacity and Ancillary Services Markets	207
Transmission Rights	207
Financial Services	208

The Retail Market	208
Utility Retail Services	209
Competitive Retail Services	210
Energy Services Companies and Other Energy Services	211
SECTION FOURTEEN: MAKING MONEY AND MANAGING RISK.....	213
How Market Participants Create Profits	214
How a Utility Makes Money — Cost-of-service Method	214
How a Utility Makes Money — Incentive Regulation	216
How Unregulated Market Participants Make Money	216
Risk Management	217
Choices for Managing Risk	219
Physical Risk Management	219
Financial Risk Management	220
Speculation versus Hedging	222
Hedging Techniques	222
Value at Risk and Other Measures of Risk	234
SECTION FIFTEEN: THE FUTURE OF THE ELECTRICITY BUSINESS.....	227
A Review of Market Changes	227
The Future of the Generation Sector	228
The Future of Transmission	229
The Future of Distribution	231
The Future of System Operations	231
The Future of Consumers	233
The Future of Retail Marketing	235
The Future of the Utility	235
A Sustainable Energy Future?	236
APPENDIX A: GLOSSARY.....	239
APPENDIX B: UNITS AND CONVERSIONS	259
APPENDIX C: ACRONYMS	261
APPENDIX D: INDEX.....	269
