

CONTENTS

SECTION ONE: INTRODUCTION	1
Today's Electricity Marketplace	1
Electricity in Modern Society	2
A Brief History of Electricity	5
SECTION TWO: WHAT IS ELECTRICITY?	9
How Electricity is Created	11
How Electricity is Used to Perform Useful Tasks	12
The Key Components of the Electric Delivery System	15
The Key Physical Properties of an Electric Delivery System	16
Electricity Cannot be Stored	16
The Path of Electrical Flow is Difficult to Control	16
Disturbances Travel Very Quickly and are Hard to Contain	17
Outages and Significant Voltage or Frequency Fluctuations are Not Acceptable	17
The Four Key Physical Sectors of the Electricity Business	18
SECTION THREE: ELECTRIC CONSUMERS	21
Residential Customers	22
Commercial Customers	25
Industrial Customers	28
Aggregate Demand Curves	32
SECTION FOUR: GENERATION	35
Changing Generation Output over Time	36
Types of Generation	37
Coal	38
Nuclear	39
Natural Gas	41
Hydro	42
Fuel Oil	43
Renewables	43

Distributed Generation 44

Environmental Considerations 45

Electric Generation, Global Warming, and Greenhouse Gas Regulation 46

Demand Response and Energy Efficiency as Alternatives to Generation 48

Electric Storage 49

Use of Generation to Satisfy the Load Curve 50

 Baseload 51

 Intermediate 51

 Peaking 52

 Reserves 52

Ownership of Generation 52

Developing a Generation Portfolio 52

The Future of Generation 54

SECTION FIVE: TRANSMISSION 59

Physical Characteristics of Transmission 60

Operation and Planning of the Transmission System 61

Transmission System Costs 62

Ownership of Transmission 62

Issues with Transmission Construction 63

The Current Status of the U.S. Transmission System 64

Transmission Smart Grid Technologies 65

SECTION SIX: DISTRIBUTION 69

Physical Characteristics of Distribution 69

 Radial Feed 73

 Loop Feed 73

 Network System 73

Operating and Planning of the Distribution System 74

Distribution System Costs 75

Ownership and the Current Status of Distribution Systems 75

The Smart Grid 76

SECTION SEVEN: ELECTRIC SYSTEM OPERATIONS 79

Operational Characteristics of Power Systems 79

What System Operations Does 80

Who Handles System Operations 80

Forecasting and Scheduling 83

 Demand Forecasting 84

 Scheduling Generation, Transmission, and Reserves 84

Ancillary Services	85
Automatic Generation Control (AGC)	85
Load-following Resources	85
Spinning Reserves	86
Non-spinning Reserves	86
Supplemental Reserves	86
Voltage Support	86
Black Start	88
How Supply and Demand are Kept in Balance in Real Time	88
The Changing Role of System Operations	89
SECTION EIGHT: MARKET PARTICIPANTS IN THE DELIVERY CHAIN	91
Participants in the Vertically Integrated Market Model	91
Investor-owned Utilities	91
Municipal Utilities and Public Utility Districts	92
Rural Electric Co-ops	92
Federal Power Agencies	93
Public Power Agencies	94
Power Pools	94
Energy Services Companies (ESCOs)	94
Independent Power Producers and Electric Marketers	95
Participants in Restructured or Competitive Electric Markets	95
Merchant Generators	95
Transmission Companies	96
Independent System Operators (ISOs)/Regional Transmission Organizations (RTOs)	96
Electric Marketers	97
Financial Services Companies	97
Transmission Owners	97
Utility Distribution Companies	98
Load-serving Entities	98
Energy Services Companies (ESCOs)	98
SECTION NINE: ELECTRIC MARKET STRUCTURES	101
What is an Electric Market Structure?	101
Vertically Integrated Monopoly Utility Model	103
Single-buyer with Competitive Generation Model	105
Wholesale/Industrial Competition Model	106
Complete Retail Competition Model	108
Hybrid Retail Competition Model	109

Trading Arrangements110
 Wheeling112
 Decentralized112
 Integrated114
 The Current Status of Market Structures and Trading Arrangements115

SECTION TEN: REGULATION IN THE ELECTRIC INDUSTRY119

Why Regulate the Electric Industry?119
 The Goals of Regulators120
 The Historical Basis for Regulation120
 State Regulation120
 Federal Regulation121
 Who Regulates What?123
 The Regulatory Process124
 The Initial Filing124
 Preliminary Procedures125
 Hearings125
 The Draft Decision126
 The Final Decision126
 Review of Decisions126
 Tariffs126
 Setting Rates through a Traditional Rate Case127
 Determining the Authorized Rate of Return128
 Forecasting Usage128
 Determining a Revenue Requirement128
 Allocating Revenue to Customer Classes129
 Determining Rate Design129
 Allocating Revenue to Charge Types130
 Determining the Rate130
 Incentive Regulation130
 Performance-based131
 Benchmarking131
 Rate Caps131
 Service Standards131
 Market-based Rates132
 State and Federal Rate Methodologies132
 The Future of Regulation132

SECTION ELEVEN: THE CONCEPTS OF MARKET RESTRUCTURING	135
Why Restructuring?	136
Market Evolution under Deregulation	137
Regulation	138
Deregulation	139
Commoditization	140
Value-added Services	140
The Necessary Components for a Competitive Marketplace	141
Supply Side Competition	141
Fair Access to Transmission	142
Unbiased System Operations	142
Demand Side Competition	143
Distribution without Impediments to Competition	144
Opportunities for Hedging Risks	144
Creating a Competitive Market	145
Transitioning Generation	145
Creating a Robust Transmission Market	146
Creating an ISO	147
Transitioning to Customer Choice	147
Continued Regulation of Transmission and Distribution	147
Ensuring Reliability	147
Settlements	148
SECTION TWELVE: THE HISTORY OF ELECTRIC MARKET RESTRUCTURING ..	151
Federal Restructuring	152
The First Steps Towards Independent Generation – PURPA of 1978	152
Fostering Wholesale Generation Competition – the Energy Policy Act of 1992 ..	152
Furthering Open Access Transmission – FERC Order 888	154
Encouraging Formation of Regional Transmission Operators – FERC Order 2000 ..	156
Market Design Stalemate	157
Ongoing Slow Growth of ISO Markets	158
State Restructuring	158
Separating the Vertical-utility Functions	159
Allowing Retail Access	160
Continued Regulation of the Monopoly Function	160
Current Status of Retail Choice in the U.S.	161
California – A Bad Retail Competition Experience	161
Texas and New York – More Successful Retail Competition Experiences ..	164
Restructuring in Other Countries	165

SECTION THIRTEEN: MARKET DYNAMICS167

- Supply and Demand168
 - Short-term Supply and Demand169
 - Long-term Supply and Demand170
 - The Current Supply/Demand Situation in the U.S.170
- Pricing171
 - Indexes and Trading Hubs172
 - Price Volatility174
- The Wholesale Market175
 - Energy and Generation Capacity176
 - Forward Markets176
 - Spot Markets177
 - Transmission Rights177
 - Financial Services178
- The Retail Market178
 - Utility Retail Services179
 - Competitive Retail Services180
 - ESCO and other Energy Services180

SECTION FOURTEEN: MAKING MONEY AND MANAGING RISK183

- How Market Participants Create Profits184
 - How a Utility Makes Money — Cost-of-service Method184
 - How a Utility Makes Money — Incentive Regulation186
 - How Unregulated Market Participants Make Money186
- Risk Management186
 - Choices for Managing Risk188
 - Physical Risk Management188
 - Financial Risk Management189
 - Speculation versus Hedging190
 - Hedging Techniques192
 - Value at Risk193

SECTION FIFTEEN: THE FUTURE OF THE ELECTRICITY BUSINESS197

- A Review of Market Changes197
- The Future of the Generation Sector198
- The Future of Transmission199
- The Future of Distribution199
- The Future of System Operations200
- The Future of Retail Marketing200
- A Sustainable Energy Future?201

APPENDIX A: GLOSSARY.....205

APPENDIX B: UNITS AND CONVERSIONS217

APPENDIX C: ACRONYMS.....219

APPENDIX D: INDEX225
