

CONTENTS

SECTION ONE: INTRODUCTION	1
Today's Electricity Marketplace	1
Electricity in Modern Society	4
A Brief History of Electricity	5
SECTION TWO: WHAT IS ELECTRICITY?	11
How Electricity Is Created	13
How Electricity Is Used to Perform Useful Tasks	14
The Key Components of the Electric Delivery System	17
The Key Physical Properties of an Electric Delivery System	18
Electricity Cannot Be Stored	18
The Path of Electrical Flow Is Difficult to Control	18
Disturbances Travel Very Quickly and Are Hard to Contain	19
Outages and Significant Voltage or Frequency Fluctuations Are Not Acceptable ..	19
The Four Key Physical Sectors of the Electricity Business	20
SECTION THREE: ELECTRIC CONSUMERS	23
Residential Customers	24
Commercial Customers	27
Industrial Customers	30
Aggregate Demand Curves	34
SECTION FOUR: GENERATION	37
Changing Generation Output over Time	38
Types of Generation	38
Coal	39
Nuclear	40
Natural Gas	42
Hydro	43
Petroleum	44
Renewables	44
Distributed Generation	46

Environmental Considerations47

Electric Generation, Global Warming, and Greenhouse Gas Regulation48

Demand Response and Energy Efficiency as Alternatives to Generation50

Electric Storage51

Use of Generation to Satisfy the Load Curve51

 Baseload52

 Intermediate52

 Peaking53

 Reserves53

 Flexible Generation53

Ownership of Generation54

Developing a Generation Portfolio54

The Future of Generation55

SECTION FIVE: TRANSMISSION61

Physical Characteristics of Transmission62

Operation and Planning of the Transmission System63

Transmission System Costs64

Ownership of Transmission64

Issues with Transmission Construction65

Transmission Outages66

Transmission Smart Grid Technologies66

SECTION SIX: DISTRIBUTION69

Physical Characteristics of Distribution69

 Radial Feed73

 Loop Feed73

 Network System73

Operating and Planning of the Distribution System74

Distribution System Costs75

Ownership and the Current Status of Distribution Systems75

The Smart Grid76

Distributed Energy Resources76

Microgrids77

SECTION SEVEN: ELECTRIC SYSTEM OPERATIONS79

Operational Characteristics of Power Systems79

What System Operations Does80

Who Handles System Operations80

Forecasting and Scheduling83

Demand Forecasting	84
Scheduling Supply, Transmission, and Reserves	84
Ancillary Services	85
Automatic Generation Control (AGC)	85
Load-following Resources	86
Spinning Reserves	86
Non-spinning Reserves	86
Supplemental Reserves	86
Flexible Ramp Capacity	86
Voltage Support	88
Blackstart	88
How Supply and Demand Are Kept in Balance in Real Time	88
The Value of Large Geographical Dispatch	89
Scheduling in Regions with High Penetrations of Variable Supply and Distributed Energy Resources .89	
The Changing Role of System Operations	92
SECTION EIGHT: MARKET PARTICIPANTS IN THE DELIVERY CHAIN	95
Participants in the Vertically Integrated Market Model	95
Investor-owned Utilities	95
Municipal Utilities and Public Utility Districts	96
Rural Electric Co-ops	96
Federal Power Agencies	97
Public Power Agencies	98
Power Pools	98
Energy Services Companies (ESCOs)	98
Independent Power Producers and Electric Marketers	98
Participants in Restructured or Competitive Electric Markets	99
Merchant Generators and IPPs	99
Transmission Companies	99
Independent System Operators (ISOs)/Regional Transmission Organizations (RTOs) 100	
Electric Marketers	101
Financial Services Companies	101
Transmission Owners	101
Utility Distribution Companies	102
Load Serving Entities	102
Energy Services Companies (ESCOs)	102
SECTION NINE: ELECTRIC MARKET STRUCTURES	105
What is an Electric Market Structure?	105

Vertically Integrated Monopoly Utility Model107

Single-buyer with Competitive Generation Model109

Wholesale/Industrial Competition Model110

Complete Retail Competition Model112

Hybrid Retail Competition Model113

Trading Arrangements114

 Wheeling116

 Decentralized116

 Integrated118

The Current Status of Market Structures and Trading Arrangements119

Markets for Distributed Energy120

SECTION TEN: REGULATION IN THE ELECTRIC INDUSTRY123

Why Regulate the Electric Industry?123

The Goals of Regulators124

The Historical Basis for Regulation124

 State Regulation124

 Federal Regulation125

Who Regulates What?127

The Regulatory Process128

 The Initial Filing129

 Preliminary Procedures129

 Hearings129

 The Draft Decision130

 The Final Decision130

 Review of Decisions130

 Tariffs130

Setting Rates through a Traditional Rate Case131

 Determining the Authorized Rate of Return131

 Forecasting Usage132

 Determining a Revenue Requirement132

 Allocating Revenue to Customer Classes133

 Determining Rate Design133

 Allocating Revenue to Charge Types134

 Determining the Rate134

Incentive Regulation135

 Performance-based135

 Benchmarking135

 Rate Caps136

 Service Standards136

Market-based Rates	136
State and Federal Rate Methodologies	136
The Future of Regulation	138
SECTION ELEVEN: THE CONCEPTS OF MARKET RESTRUCTURING	141
Why Restructuring?	142
Market Evolution under Deregulation	144
Regulation	144
Deregulation	145
Commoditization	146
Value-added Services	147
The Necessary Components for a Competitive Marketplace	147
Supply-side Competition	147
Fair Access to Transmission	148
Unbiased System Operations	148
Demand-side Competition	149
Distribution without Impediments to Competition	150
Opportunities for Hedging Risks	150
Creating a Competitive Market	151
Transitioning Generation	151
Creating a Robust Transmission Market	152
Creating an ISO	152
Transitioning to Customer Choice	153
Continued Regulation of Transmission and Distribution	153
Ensuring Reliability	153
Settlements	154
Future Distribution Restructuring	154
SECTION TWELVE: THE HISTORY OF ELECTRIC MARKET RESTRUCTURING ..	157
Federal Restructuring	158
The First Step Toward Independent Generation — PURPA of 1978	158
Fostering Wholesale Generation Competition — the Energy Policy Act of 1992 .158	
Furthering Open Access Transmission — FERC Order 888	160
Encouraging Formation of Regional Transmission Operators — FERC Order 2000 .162	
Market Design Stalemate	163
Ongoing Slow Growth of ISO Markets	164
State Restructuring	164
Separating the Vertical-utility Functions	165
Allowing Retail Access	166

Continued Regulation of the Monopoly Function166
 Current Status of Retail Choice in the U.S.167
 California — A Bad Retail Competition Experience167
 Texas and New York — More Successful Retail Competition Experiences ..170
 Restructuring in Other Countries171

SECTION THIRTEEN: MARKET DYNAMICS175

Supply and Demand176
 Short-term Supply and Demand177
 Long-term Supply and Demand178
 The Current Supply/Demand Situation in the U.S.178
 Pricing180
 Indexes and Trading Hubs181
 Price Volatility182
 The Importance of Gas Prices in Many Electric Markets183
 The Wholesale Market183
 Energy and Generation Capacity184
 Forward Energy Markets185
 Day-ahead and Real-time Energy Markets187
 Transmission Rights187
 Financial Services188
 The Retail Market188
 Utility Retail Services189
 Competitive Retail Services190
 ESCO and Other Energy Services190

i

SECTION FOURTEEN: MAKING MONEY AND MANAGING RISK193

How Market Participants Create Profits194
 How a Utility Makes Money — Cost-of-service Method194
 How a Utility Makes Money — Incentive Regulation196
 How Unregulated Market Participants Make Money196
 Risk Management196
 Choices for Managing Risk198
 Physical Risk Management199
 Financial Risk Management200
 Speculation versus Hedging200
 Hedging Techniques202
 Value at Risk203

SECTION FIFTEEN: THE FUTURE OF THE ELECTRICITY BUSINESS	207
A Review of Market Changes	207
The Future of the Generation Sector	208
The Future of Transmission	209
The Future of Distribution	210
The Future of System Operations	210
The Future of Retail Marketing	212
The Future of the Utility	213
A Sustainable Energy Future?	214
APPENDIX A: GLOSSARY.....	217
APPENDIX B: UNITS AND CONVERSIONS	233
APPENDIX C: ACRONYMS.....	235
APPENDIX D: INDEX	241
